Experience

Kodo *(YC W21)*, **Mumbai** Jul 2026 – Oct 2026

Software Engineering Intern *Python, LangChain, LangSmith, asyncio, PostgreSQL, Azure, Docker*

- Raised a production AI finance agent's eval pass rate from **68% to 85%** with **zero regressions** by fixing order routing, risk checks and ID handling in its ReAct prompt, output schema and LLM judges.
- Cut the LLM eval suite's runtime **16**× (25 min → 1.5 min) by running test cases concurrently with asyncio and moving blocking LLM-judge calls off the event loop, and added repeated-run pass rates to separate flaky cases from real regressions.
- Benchmarked 10 LLM-as-judge configurations and replaced a two-model judge with one, cutting grading cost **93%** and latency **52%** at the same accuracy.
- Made the agent's currency math deterministic by moving lakh/crore scaling from the LLM into a tool, eliminating 10× errors.
- Built LangChain tools over ERP, payments and banking data (SQL, REST APIs) with pagination and deduplication.
- Added production observability: LangSmith tracing of every SQL and HTTP call under the agent's tools, and per-chat outcome logging linked to frontend sessions in New Relic.

Anubal Fusion, Hyderabad Sep 2025 – Mar 2026

AI/ML Engineering Intern *Python, Flask, TomoPy, OpenCV, 3D Slicer*

- Built the lab's Micro-CT scanner software (Flask → Windows .exe): calibration, motorized rotation, dual-camera capture and XY stage control over serial G-code.
- Implemented 3D reconstruction with TomoPy (gridrec, FBP, SIRT/ART) and dark/flat-field correction, with an in-browser slice viewer and one-click volume rendering in 3D Slicer.

Projects

Mantis – Lean Browser Interface for LLM Agents Oct 2026 – Present

GitHub | *Live* *TypeScript, MCP, Node.js, Playwright*

- Open-source MCP server that gives agents numbered text page views instead of screenshots or full accessibility trees, cutting tokens and tool calls while matching or beating accuracy.
- On real-site benchmarks (Luna / Haiku): 29–47% fewer input tokens, 29–37% fewer calls and ∼ less time on long tasks; 35–57% fewer tokens on short tasks vs Playwright accessibility-tree baseline.

VedicAI – Multilingual Voice AI Health Assistant Feb 2026 – Present

GitHub | *Live* *Flask, Llama 3.3 70B, Sarvam AI, WebSockets, Firebase, Docker*

- Selected into the **Sarvam AI Startup Program**; voice-first Ayurveda and yoga assistant in **11 Indian languages**.
- Built a real-time streaming voice pipeline (live speech-to-text → LLM → parallel translation and text-to-speech per sentence) with emergency triage and persistent chat memory.

VBay – Peer-to-Peer Campus Marketplace Oct 2024 – May 2025

GitHub | *Google Play Store* *Flutter, Firebase, GCP Cloud Functions, OAuth*

- Launched a P2P marketplace app; grew to **2,000+** users on 2 campuses, **500+** listings and **100+** transactions.
- Built real-time buying and selling flows, OAuth sign-in, push notifications and a serverless backend on GCP Cloud Functions.

Skills

Languages: Python, SQL, JavaScript, TypeScript, Dart, C++

AI/ML: LLM Agents, LLM Evaluation, RAG, LangChain, LangSmith, MCP, ACP, PyTorch, scikit-learn, OpenCV, NumPy

Backend & Infra: Flask, REST APIs, WebSockets, asyncio, PostgreSQL, Docker, GitHub Actions (CI/CD), Git, Linux

Cloud & Apps: Azure, GCP, Firebase, Flutter, Streamlit, Electron

Education

Vellore Institute of Technology, Bhopal 2022 – 2026

B.Tech in CSE with specialization in AI & ML *GPA: 8.19/10.0*

Achievements

- **Founding Member, Startup Club** (2024–25) – organized 7+ ideathons engaging 500+ students.
- **National Research Scholar**, Vision for Viksit Bharat 2024 – authored a paper on AI/VR for cultural heritage preservation.
